Install new Schedule 40 2" PVC for all plumbing lines from pool to filter site.

Equipment Replacement And Upgrades

Upgrade to industry leading equipment to improve efficiency, performance, and longevity.

Perfect Time To Upgrade!

LED Lighting • Spas • Sun Decks • Saltwater Systems • Automation • Energy Efficient Heaters • Slides & Water Features + More!

Marble Dusting & Plastering

What Is Marble Dust?

Marble dust is the main plaster finish of a gunite pool. Over time from chemicals and weather, the integrity of your pool's plaster will start to break down, causing a rough surface, hollow spots and cracking.

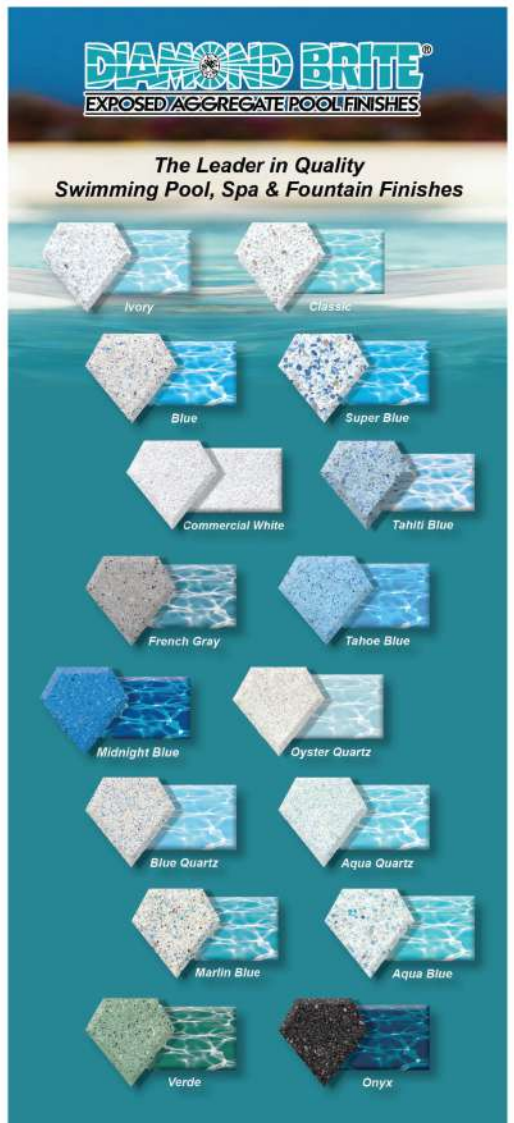

What Is The Marble Dusting Process?

The pool is drained and then inspected for hollow spots which are broken out and repaired. The surface of the pool is then acid washed and bond coated. After all preparation steps have been completed, a new layer of marble dust / plaster will be applied to the entire surface of the pool leaving a new smooth finish in the color of your choice.

Restoring Your Pool Back To New

Marble dusting revitalizes your gunite pool back to looking new again, as well as repairing any issues during the process.

Tile

Why Use Pool Tiling?

Installing tile as your pool finish adds instant elegance, durability, and customization. With endless color, texture, and pattern options, tile creates a polished, high-end look that enhances your pool's design while complementing your outdoor space.

Tile is also one of the most durable and low-maintenance pool finishes available. It resists staining, fading, and chemical wear, ensuring long-lasting beauty. Professionally installed tile delivers a seamless, flawless finish that elevates your pool's appearance while adding lasting value to your property.
